DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 14-17 is withdrawn in view of the newly discovered reference(s) to Daly et al.(US 2002/0093521) and Naegle (US 2003/0052886). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Daly et al.(US 2002/0093521).

As to claim 14, Daly discloses a system for rendering input image data formatted for a first colored subpixel layout onto a display panel comprising a second colored subpixel layout comprising a repeating group of colored subpixels and wherein said first subpixel layout is different from some of said second subpixel layout, said system comprising:

an input means (Fig. 7(50)) for accepting input image data formatted for said first colored subpixel layout;

a subpixel rendering engine (Fig. 7, sub-pixel sampling)) for remapping the input image data into output data formatted for said second colored subpixel layout (Fig. 2, mapping high resolution image layout 4 into output subpixel layout 6);

a channel formatter for effectively ordering said output data such that a timing scheme (Fig. 3 and 4, spatial frequency indicates timing scheme) is affected to map said input image data formatted for said first colored subpixel layout onto said output data formatted for said second colored subpixel layout (see Fig. 9, channel formatter (72, 116) splits and combines channels); and

a means for outputting the data formatted by said channel formatter to said display (see Fig. 9(120, 122)).

As to claim 15, Daly discloses the system of Claim 14 wherein said system further comprises

a gamut mapping system (Fig. 9(74)) for remapping the image data in a first colored subpixel data format (RGB) into said second colored subpixel data format (LAB) wherein said first colored subpixel data comprises data in a first set of primary colors and said second colored subpixel data format comprises data in a second set of primary colors (See [0068]-[0070]).

As to claim 16, Daly discloses the system of Claim 14 wherein the channel formatter formats said output data according to the number of channels available to the display controllers (Fig. 9(86, 114, 112), and [0071]-[0074]).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Daly in view of Naegle (US 2003/0052886).

As to claim 17, Daly discloses the system of Claim 16 above.

However, Daly disclosure does not specifically teach the channel formatter adds dummy image data to the valid output data set.

Naegle discloses a video steaming modules wherein teaches dummy data mix dummy pixel values into video steam (See [0122]).

It would have been obvious to one ordinary skill in the art at the time of invention was made to incorporate dummy data as in Naegle into the system of Daly, because dummy data is necessary used to mixed into complete video signal as they are operated on the linear succession (see [0122]-[0123]).
